May 2015

*Above:* NOAA oceanographer Jim Manning prepares 5<sup>th</sup> and 6<sup>th</sup> graders for construction of a surface current drifter.

*Below:* After cutting out and decorating underwater "sails", students attach them to the drifter

## ***NOAA Scientists in the Classroom***

On April 7, staff and scientists from NOAA's Northeast Fisheries and Science Center (NEFSC) visited TCS classrooms for the school's second NOAA Ocean Day at TCS which encouraged ocean stewardship by introducing science into the classrooms

Topics of study included marine mammals, bioacoustics, marine mammal adaptations, ocean surface currents and surface current drifters and marine ecosystems.

NEFSC featured the day of science on their website. You can read the article and view a slide show by [clicking here](#).

"We have the same type of bone in our bodies, only it is much, much smaller," explains Grace Simpkins to the kindergarten class.

Wow! That's baleen from a minke whale!
